Blockchain Technology Market Guide

What is Blockchain Technology Market?

Blockchain technology market refers to the total market where all kinds of products, services and software are based on blockchain technology. This includes financial applications as well as all kinds of public, individual and company applications. For example, a blockchain-based transportation application is also part of the blockchain technology market.

Although not yet widespread all over the world, blockchain-based applications are expected to form the infrastructure of all kinds of applications by 2030. Unlike other infrastructures, blockchain applications can work in superior integration with each other. It is predicted that this situation will increase the market volume and value very quickly.

Another great advantage of blockchain is that it provides higher security standards than any other infrastructure before. The security standards that could only be used at the bank and enterprise level before are now brought to the level that even the simplest application can reach.

Can You Migrate Your Apps to Blockchain Technology?

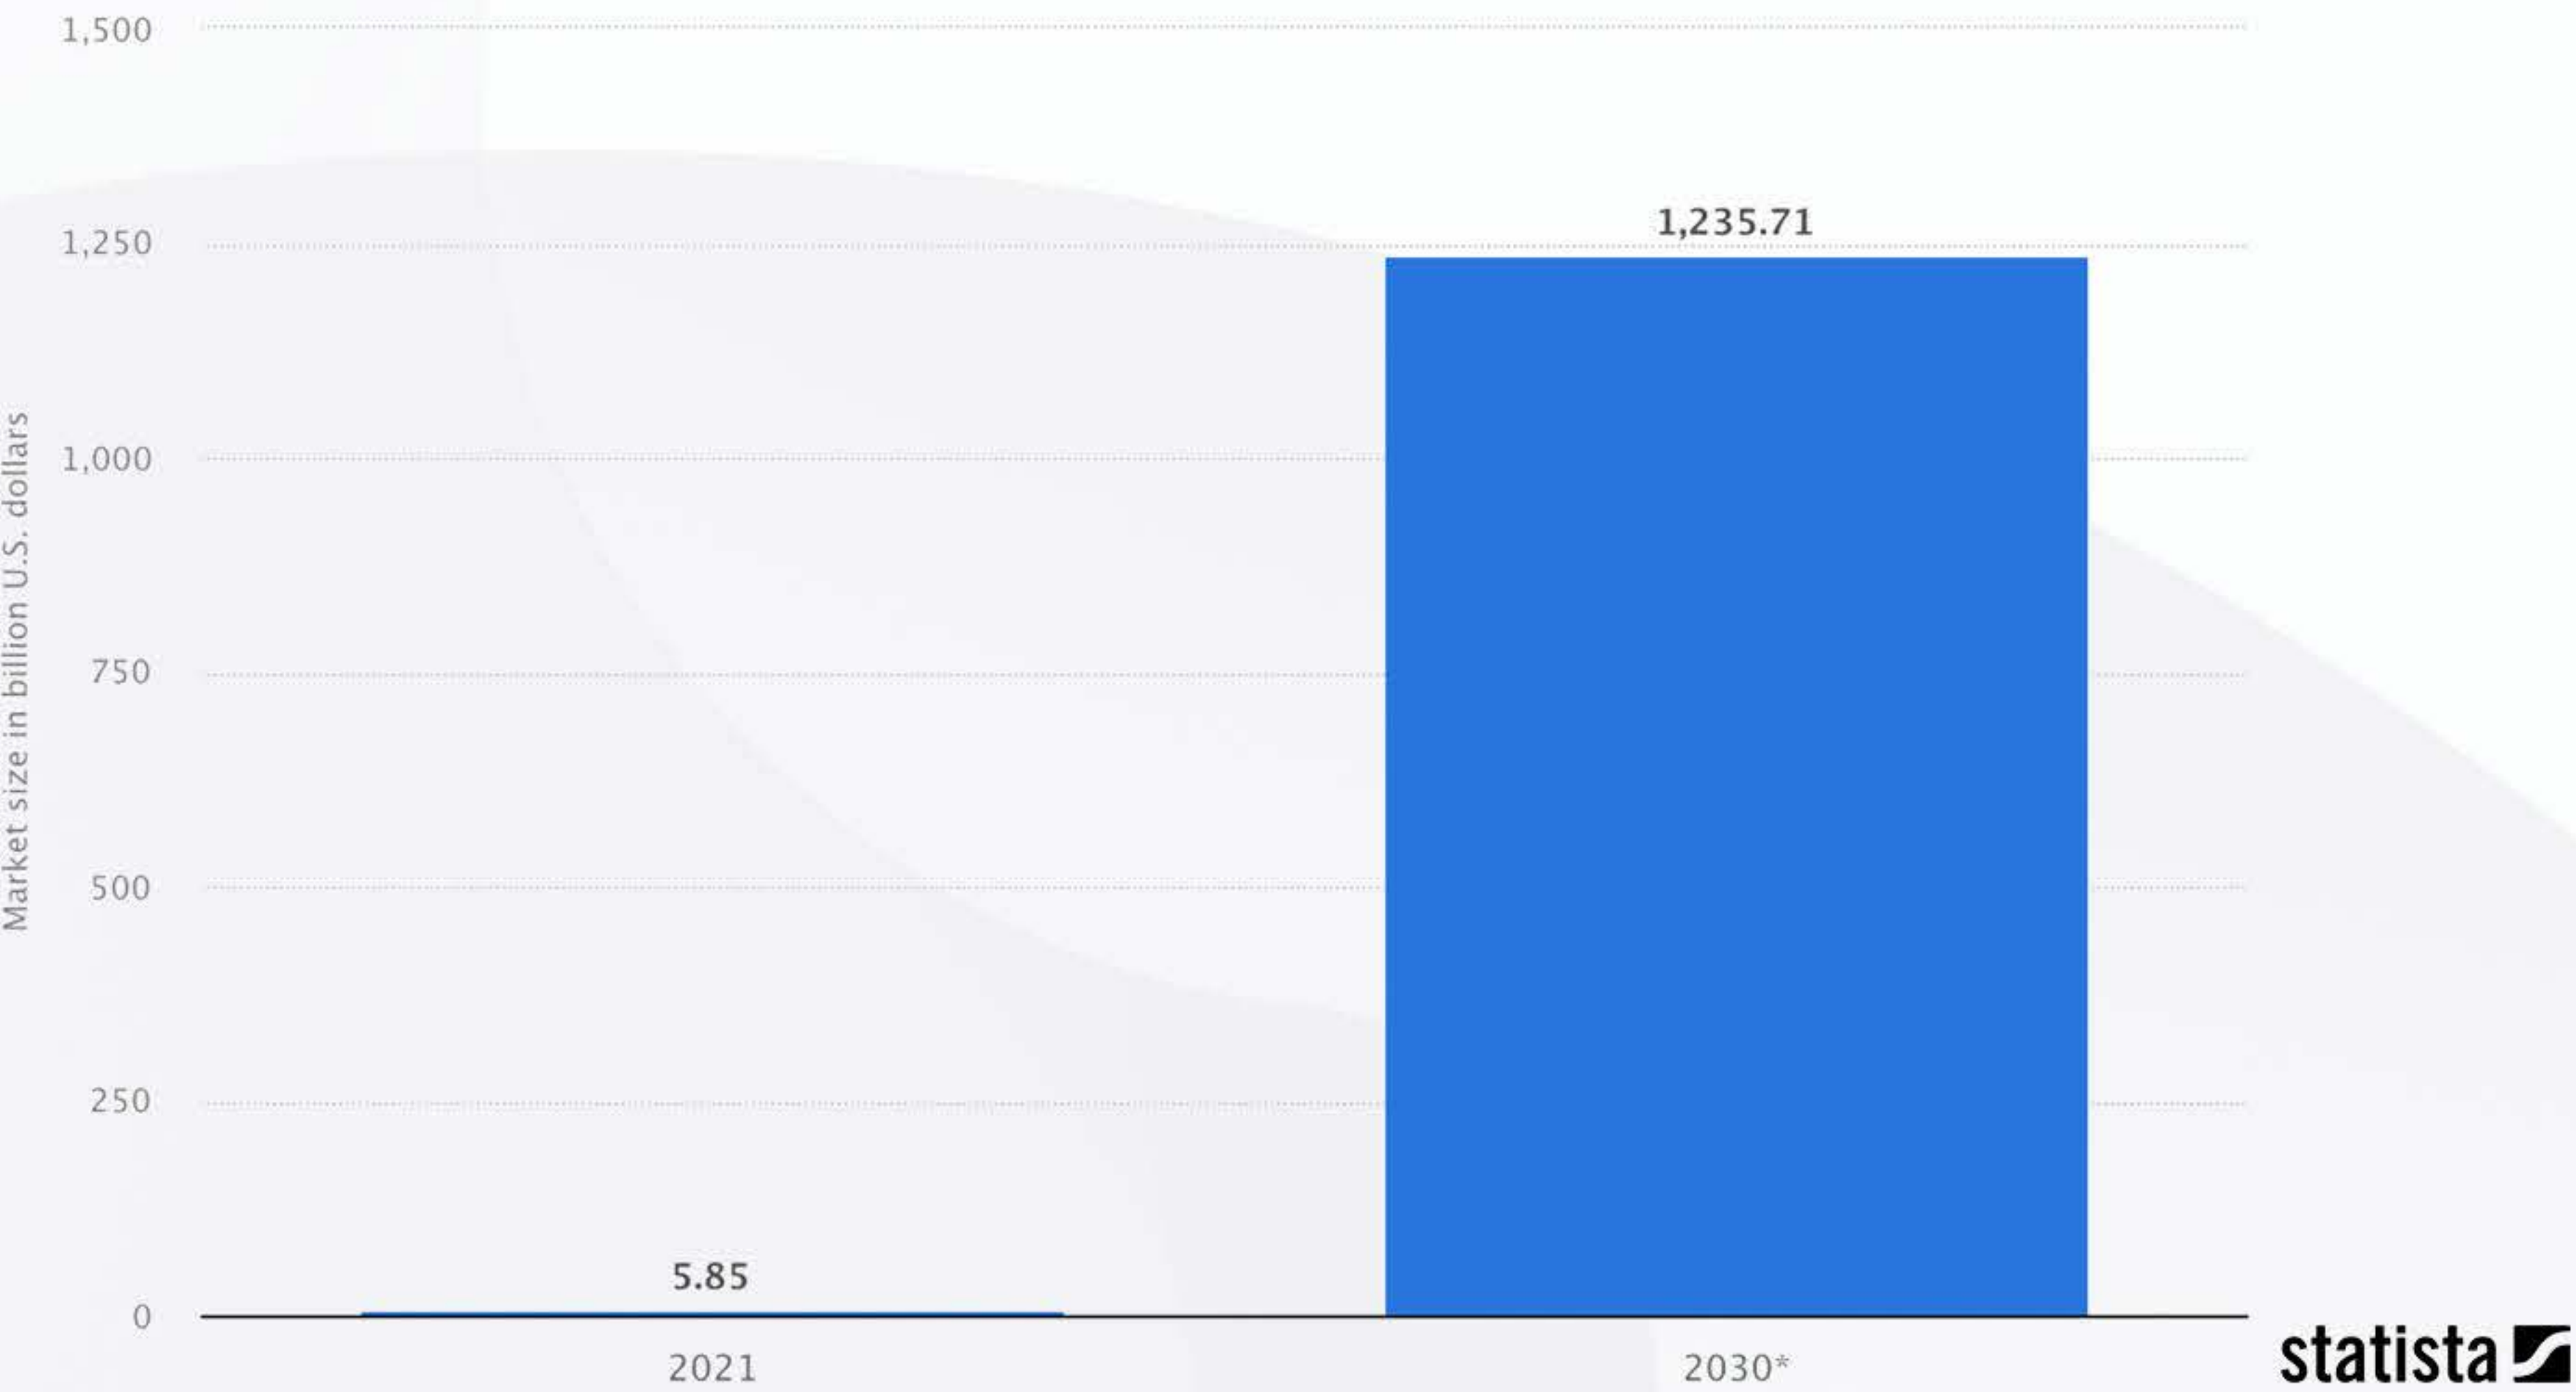

You can take your place in the market by transferring your existing applications to the blockchain infrastructure in two different ways.

- **Option-1 Rebuild:** If your application doesn't have many parts, functions and processes, the smartest way is to re-encode it with the blockchain. Thus, you recreate all parts of the application with the blockchain and ensure its healthy operation. But remember; this path is the right choice for small and medium applications.
- **Option-2 Develop Partially:** If your application is over a certain volume and contains instant transactions or has too many functions, the most logical way is to break it into parts and develop certain parts with blockchain. Thus, before moving an entire application, you can make an application compatible with the blockchain infrastructure piece by piece and over time, you can have an application that works completely on the blockchain.

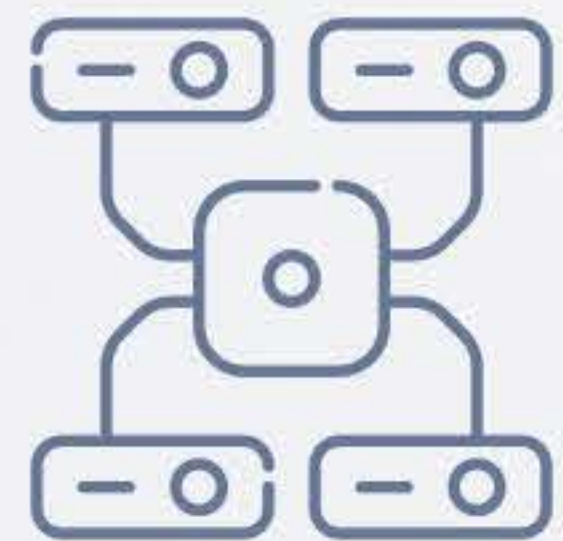

Blockchain Technology Market Size Worldwide

It is expected that the global blockchain market volume will exceed \$1.2 Trillion by 2030. You can be a part of this market by moving your technology to the blockchain before it's too late.

How Can You Get Involved In The Blockchain Market?

for Individual Developers and Small Businesses

Develop the low-volume applications that you will offer to users with the blockchain and offer the opportunity to connect to other blockchain apps.

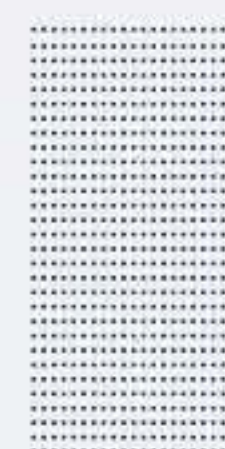

for Corporate Businesses and Voluminous Projects

Migrate your existing applications to the blockchain infrastructure and offer unique security, speed, connectivity. Get your seat early.

*** Note that this guide contains limited information. Remember that your developing process should be much more complex and professional. Many leading companies apply to expert teams for the management of these processes. You can contact the CorpLine® Support Team to get information about your processes!
