Business AR Guide

What Does Augmented Reality (AR) Mean for Business?

Augmented reality technology creates unique possibilities for many different industries. But there are ways for business life that are different from all others and increase productivity. It is possible to make professional business processes much faster, more effective, efficient and cost-effective by using innovative technologies.

Corporate requirements constitute a large percentage of today's business life. Daily meetings, flows, presentations to senior staff/management make up most of the business. However, in the rapidly digitalizing and developing world, the time spent on these transactions has begun to be questioned. It has been determined that much higher performance can be achieved even when it is reduced to 4 working days instead of 5 working days a week.

What technology has to do now is to make these 4 days much faster and more effective! At this point, solutions created by using augmented reality are called "augmented reality for business".

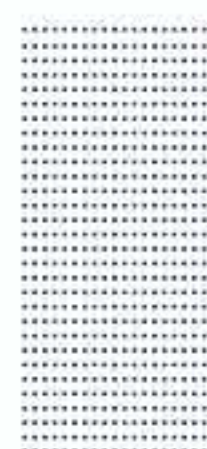

How Can AR Be Integrated into Business Processes?

- **Troubleshooting:** The first thing you need to do is technology independent. In your business processes, you should identify the points where time is spent and the efficiency is low. For this, observing for a certain period of time gives the healthiest results. Everything that spends more time, effort and budget than necessary means low efficiency. Watch and note them.
- **Incrementable Stages:** Secondly, focus on what you can transform in the problems you identify. What stages of inefficiencies can you improve? The best way to do this is by cross-comparison.
- **Solutions with Augmented Reality:** Finally, focus on virtuality in development points. Adapt and analyze the benefits of augmented reality technology to the processes you want to improve. Will productivity increase be observed? If your answer is "yes", start developing your projects without wasting any time!

VR&AR Technology Market Size Worldwide

In 2023, the VR&AR ecosystem (except for integrated systems) alone is expected to reach \$30 Billion+ in volume. According to projections, this figure will exceed \$50 Billion+ by 2027.

How Can You Get Involved In The AR Market?

for Medium and Large Businesses

Turn to applications that can be used from existing devices. For example, view instant data and models with mobile phones. Eliminate intermediate processes.

for Enterprises and Global Market

Digitize the corporate processes. Visualize approvals and reviews with AR. Deliver non-existent enhancements tangibly. Register it. Develop. Manage.

*** Note that this guide contains limited information. Remember that your developing process should be much more complex and professional. Many leading companies apply to expert teams for the management of these processes. You can contact the CorpLine® Support Team to get information about your processes!

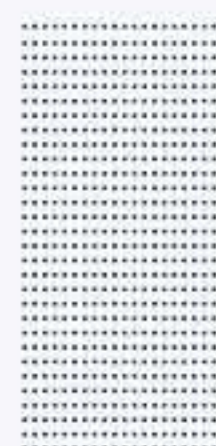

Where Are We? All Around the World!

CorpLine® services have the capacity to reach billions of people around the world. Advanced solutions are developed with a philosophy based on internet technologies. Progress continues with our customer portfolio from different sectors. We have references from 8 different countries, for now... Remember; we are actually all over the world!
