## Integrated Software Guide

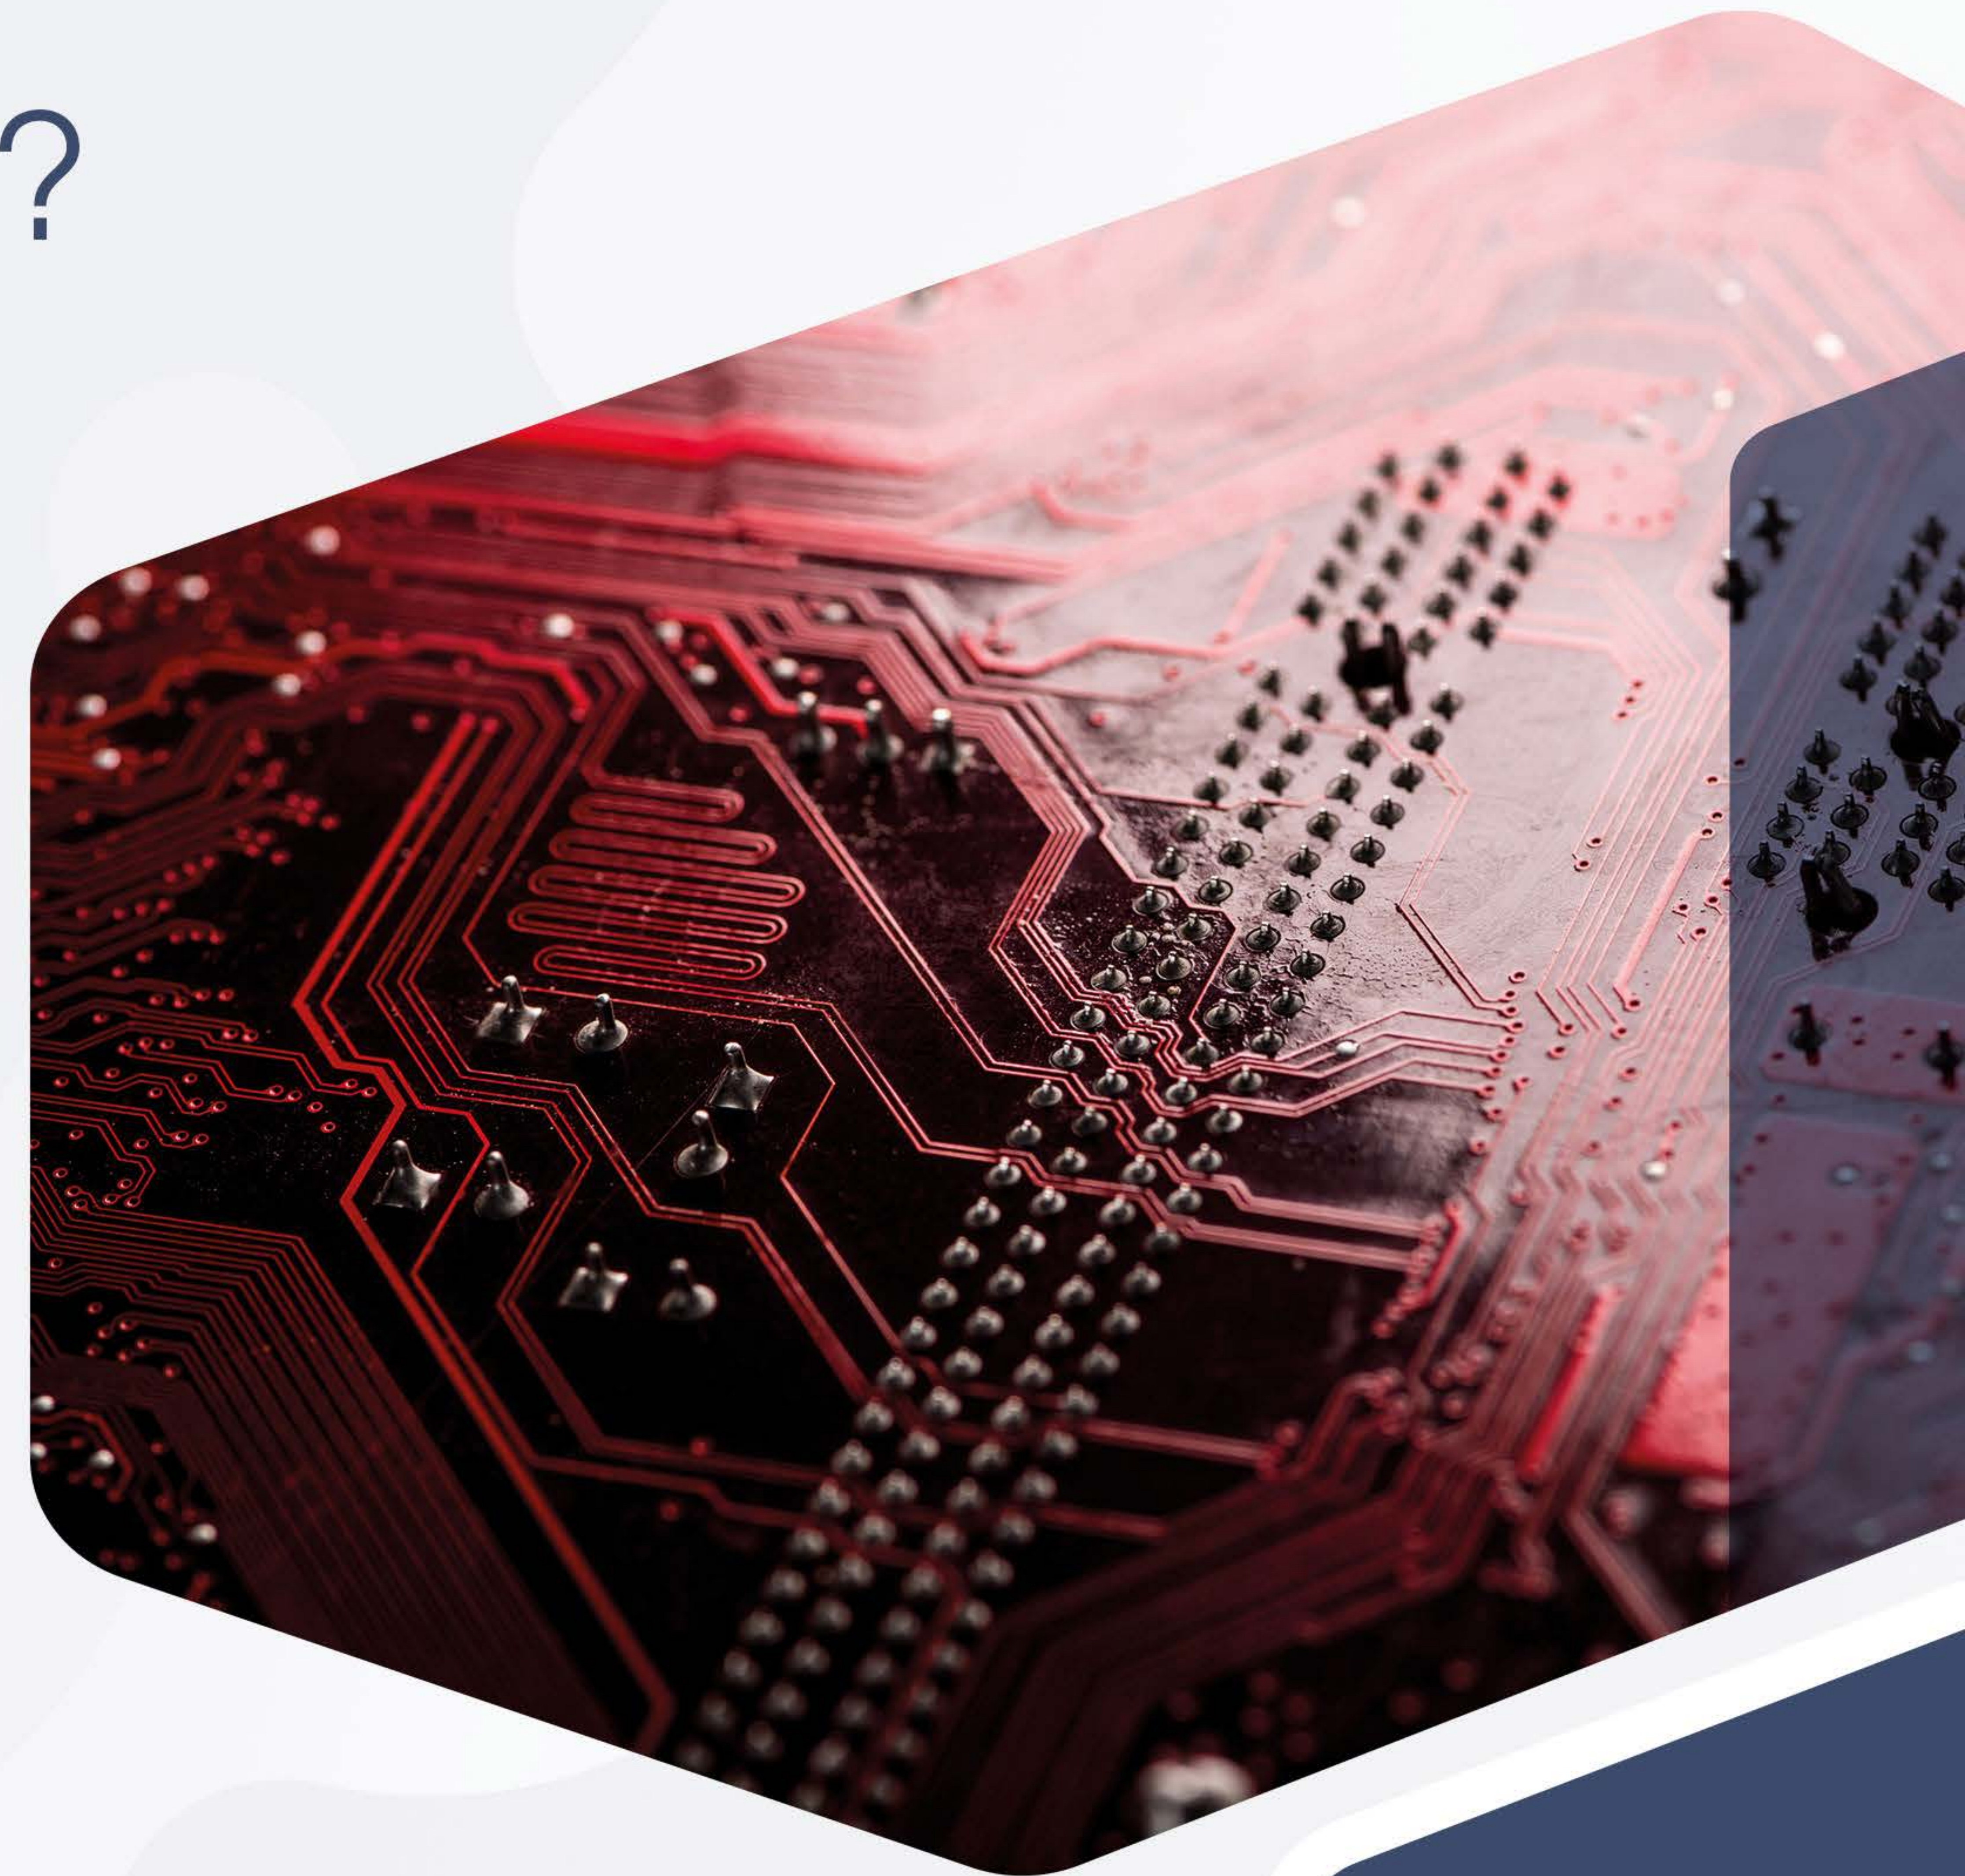

# What is Integrated Software?

Integrated software can generally be referred to as programs that support other software along with it. For example, Microsoft's Excel program is a functional software that can be used alone. However, by being integrated with other software, it enables data outputs from many different programs to be taken in Excel format. Applications that work in this way and can work with each other for inputs or outputs are called "integrated software".

With the developing technology, the advanced software of many companies has become interoperable with even the smallest programs. Gathering the functions that you and your business need in a single software can create high costs and waste of time. Instead, integrating service-based programs with each other may be the most logical solution.

You can use applications that meet the necessary technical conditions by integrating them with each other. Only the capabilities of the integrated programs determine the limit of what you can do.

# What are the Advantages of Using Integrated Software?

- **Save Time:** It usually takes months to add new advanced functions to your business software. It may even happen that operations without direct results take years. However, by using integrated software, you can access the features you need only at the end of the integration process and start using them immediately.
- **Reduce Cost:** Bringing new features to business software costs money over time. Even with a minimum number of teams and resources, you can meet costs of ten thousand, hundreds of thousands, even millions of dollars. Instead, with the right integrated software, you will not only reach what you need quickly, but also with a cost advantage of up to 90%.
- **Advanced Support:** Large software companies have large committees. If you wish, you can get support directly from software giants from which you provide integrated software. If you wish, you can get fast and advanced support from thousands of integrator companies in the market.

# Points to Consider When Choosing Integrated Software

**for Individual Developers and Small Businesses**  
Low Pricing --> Service Contract Periods --> Payment Options --> Technical Support Facilities --> Sales Channels --> Minimum Transaction Volumes

**for Corporate Businesses and Voluminous Projects**  
Full Cloud Infrastructure --> Flexible Pricing --> Developer Community --> Number of Integrator Firms --> Technical Facilities --> Firm Size

\*\*\* Note that this guide contains limited information. Remember that your choosing process should be much more complex and professional. Many leading companies apply to expert teams for the management of these processes. You can contact the CorpLine® Support Team to get information about your processes!

# Where Are We? All Around the World!

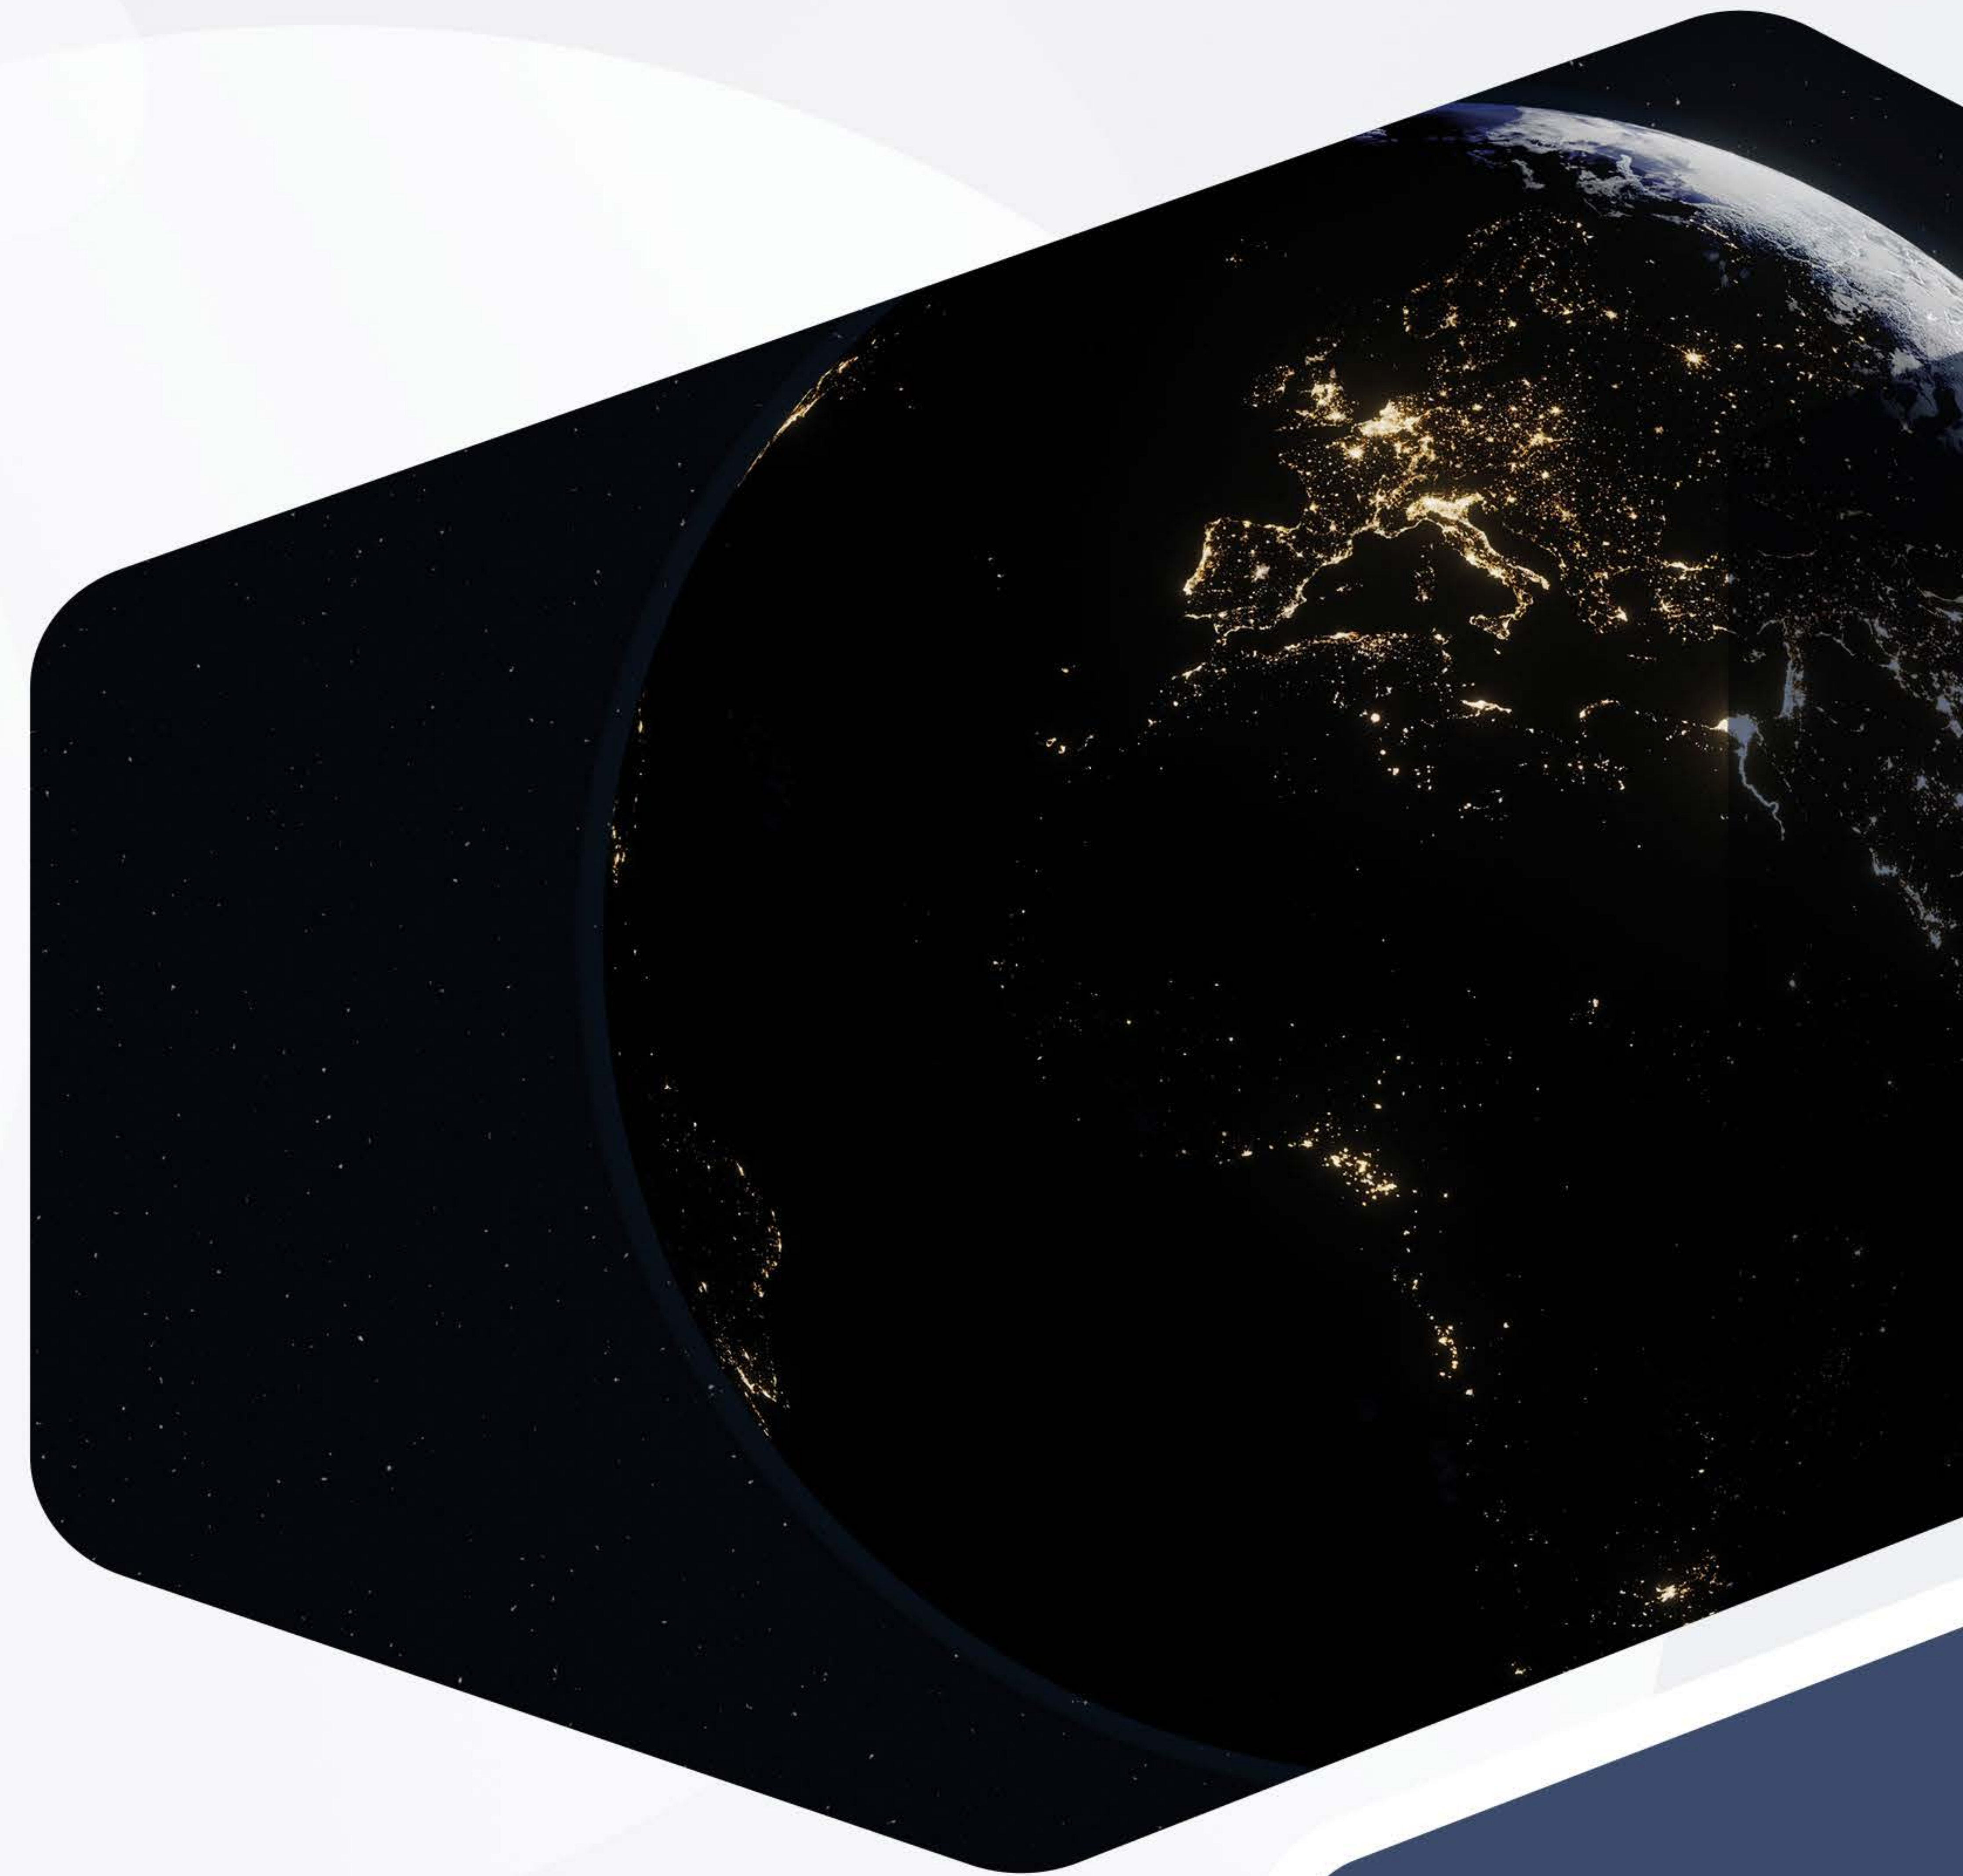

CorpLine® services have the capacity to reach billions of people around the world. Advanced solutions are developed with a philosophy based on internet technologies. Progress continues with our customer portfolio from different sectors. We have references from 8 different countries, for now... Remember; we are actually all over the world!
